# CS302 - Data Structures using C++ 

Topic: Algorithm Efficiency

Kostas Alexis

## What is a Good Solution?

- A program incurs a real and tangible cost
- Computing time
- Memory required
- Difficulties encountered by users
- Consequences of incorrect actions by the program

## What is a Good Solution?

- A program incurs a real and tangible cost
- Computing time
- Memory required
- Difficulties encountered by users
- Consequences of incorrect actions by the program
- A solution is good if ...
- The total cost incurs ...
- Overall all phases of its life ... is minimal

## What is a Good Solution?

- Important elements of the solution
- Good structure
- Good documentation
- Efficiency

## What is a Good Solution?

- Important elements of the solution
- Good structure
- Good documentation
- Efficiency
- Be concerned with efficiency when
- Developing underlying algorithm
- Choice of objects and design of interaction between these objects

## Measuring Efficiency of Algorithms

- Important because
- Choice of algorithm has significant impact
- Examples
- Responsive word processors
- Internet search engines
- Real-time guidance systems
- Autonomous cars

## Measuring Efficiency of Algorithms

- Analysis of algorithms
- The area of computer science that provides tools for contrasting efficiency of different algorithms
- Comparison of algorithms should focus on significant differences in efficiency
- We consider comparisons of algorithms, not programs

## Measuring Efficiency of Algorithms

- Difficulties with comparing programs (instead of algorithms)
- How are the algorithms coded
- What computer will be used
- What data should the program use
- Algorithms analysis should be independent of
- Specific implementations, computers, and data

## Measuring Efficiency of Algorithms

- Even a simple program can be "inefficient"
- What is an efficient algorithm?
- Algorithms take time to execute
- Algorithms need storage for data and variables
- Complexity
- Time and storage requirements of an algorithm
- Analysis of algorithms
- Measuring of the complexity of an algorithm
- Types of complexity
- Time complexity
- Speed (number of operations)
- Space complexity
- Storage (memory or disk)
- Inverse relationship
- Faster algorithms can require more space
- Reducing storage can increase execution time

## Measuring Complexity

- Measuring Complexity
- Express complexity in problem size
- Number of items processed by algorithm
- Usually represented by $\mathbf{n}$
- Cannot compute actual time for an algorithm
- Compute growth-rate function
- Simple function that is directly proportional to the algorithms time requirement
- Gives common basis for comparison

## Measuring Complexity

- Measuring Complexity
- Express complexity in problem size
- Number of items processed by algorithm
- Usually represented by $\mathbf{n}$
- Cannot compute actual time for an algorithm
- Compute growth-rate function
- Simple function that is directly proportional to the algorithms time requirement
- Gives common basis for comparison
- Comparing algorithms should be independent of
- Specific Implementation
- How are the algorithms coded
- Computer
- What computer is used
- Data
- The data should the program uses

## Growth-Rate Functions

- Find the sum of the first $\mathbf{n}$ positive integers

[^0]
## Growth-Rate Functions

- Find the sum of the first $\mathbf{n}$ positive integers

$$
\begin{gathered}
1+2+3+\ldots+n-1+n \\
\text { for an integer } n>0
\end{gathered}
$$

```
    Algorithm A
sum = 0
for i = 1 to n
    sum = sum + I
```

## Growth-Rate Functions

- Find the sum of the first $\mathbf{n}$ positive integers

$$
\begin{aligned}
& 1+2+3+\ldots+n-1+n \\
& \text { for an integer } n>0
\end{aligned}
$$

| Algorithm A |
| :---: | :---: |
| sum $=0$ |
| for $i=1$ to $n$ |
| sum $=$ sum +1 |$|$| sum $=0$ |
| :---: |
| for $i=1$ to $n$ |
| for $j=1$ to $i$ |
| sum $=$ sum +1 |

## Growth-Rate Functions

- Find the sum of the first $\mathbf{n}$ positive integers

$$
\begin{gathered}
1+2+3+\ldots+n-1+n \\
\text { for an integer } n>0
\end{gathered}
$$

| Algorithm A | Algorithm B | Algorithm C |
| :---: | :---: | :---: |
| $\begin{aligned} & \text { sum }=0 \\ & \text { for } i=1 \text { to } n \\ & \text { sum }=\text { sum }+I \end{aligned}$ | ```sum = 0 for i = 1 to n for j = 1 to i sum = sum + 1``` | sum $=\mathrm{n}^{*}(\mathrm{n}+1) / 2$ |

## Growth-Rate Functions

- Find the sum of the first $\mathbf{n}$ positive integers

$$
\begin{gathered}
1+2+3+\ldots+n-1+n \\
\text { for an integer } n>0
\end{gathered}
$$

| Algorithm A | Algorithm B | Algorithm C |
| :---: | :---: | :---: |
| $\begin{aligned} & \text { sum }=0 \\ & \text { for } i=1 \text { to } n \\ & \text { sum }=\text { sum }+I \end{aligned}$ | ```sum = 0 for i = 1 to n for j = 1 to i sum = sum + 1``` | sum $=\mathrm{n}^{*}(\mathrm{n}+1) / 2$ |

Algorithm B takes noticeably longer

## Growth-Rate Functions

- Find the sum of the first $\mathbf{n}$ positive integers

$$
\begin{aligned}
& 1+2+3+\ldots+n-1+n \\
& \text { for an integer } n>0
\end{aligned}
$$

- Finding the growth-rate function
- Count basic operations

| Algorithm A | Algorithm B | Algorithm C |
| :---: | :---: | :---: |
| $\begin{aligned} & \text { sum }=0 \\ & \text { for } i=1 \text { to } n \\ & \text { sum }=\text { sum }+I \end{aligned}$ | ```sum = 0 for i = 1 to n for j = 1 to i sum = sum + 1``` | sum $=\mathrm{n}^{*}(\mathrm{n}+1) / 2$ |

Algorithm B takes noticeably longer

## Growth-Rate Functions

- Find the sum of the first $\mathbf{n}$ positive integers

```
1+2+3+\ldots+n-1 +n
    for an integer n > 0
```

- Finding the growth-rate function
- Count basic operations

| Algorithm A | Algorithm B | Algorithm C |
| :---: | :---: | :---: |
| $\begin{aligned} & \text { sum }=0 \\ & \text { for } i=1 \text { to } n \\ & \text { sum }=\text { sum }+I \end{aligned}$ | ```sum = 0 for i = 1 to n for j = 1 to i sum = sum + 1``` | sum $=\mathrm{n} *(\mathrm{n}+1) / 2$ |

Algorithm B takes noticeably longer
Count "action" statements

- Statements directly related to accomplishing goal - Additions, Multiplications, Comparisons, Moves
- Ignore "bookkeeping" statements

## Growth-Rate Functions

- Find the sum of the first $\mathbf{n}$ positive integers

```
1 + 2 + 3 + ... + n-1 + n
    for an integer n > 0
```

- Finding the growth-rate function
- Count basic operations

|  | Algorithm A | Algorithm B | Algorithm C |
| :---: | :---: | :---: | :---: |
|  | ```sum = 0 for i = 1 to n sum = sum + I``` | ```sum = 0 for i = 1 to n for j = 1 to i sum = sum + 1``` | sum $=n^{*}(\mathrm{n}+1) / 2$ |
| Additions | n | $n(\mathrm{n}+1) / 2$ | 1 |
| Multiplications | 0 | 0 | 1 |
| Divisions | 0 | 0 | 1 |
| Total Operations | n | $\left(n^{2}+n\right) / 2$ | 3 |

## Growth-Rate Functions

## Growth-Rate Functions

$\mathbb{N}$

## Growth-Rate Functions

## Growth-Rate Functions

- Number of operations required as a function of $n$

| n | $\log (\operatorname{logn})$ | $\operatorname{logn}$ | $\log _{2} \mathrm{n}$ | n | nlogn | $\mathrm{n}^{2}$ | $\mathrm{n}^{3}$ | $2^{\text {n }}$ | n ! |
| :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: |
| 10 | 2 | 3 | 11 | 10 | 33 | $10^{3}$ | $10^{2}$ | 1024 | 3528800 |
| $10^{2}$ | 3 | 7 | 44 | 100 | 664 | $10^{6}$ | $10^{4}$ | $\begin{gathered} 1.2677 * 10_{3} \\ 0 \end{gathered}$ | $9.33 * 10^{157}$ |
| $10^{3}$ | 3 | 10 | 99 | 1000 | 9966 | $10^{9}$ | $10^{6}$ | $10.71 * 10^{300}$ | * |
| $10^{4}$ | 4 | 13 | 177 | 10000 | 132877 | $10^{12}$ | $10^{8}$ | * | * |
| $10^{5}$ | 4 | 17 | 276 | 1000000 | 1600964 | $10^{16}$ | $10^{10}$ | * | * |
| $10^{6}$ | 4 | 20 | 397 | 1000000 | 19931569 | $10^{18}$ | $10^{12}$ | * | * |

## Growth-Rate Functions

- Number of operations required as a function of $n$

| n | $\log (\operatorname{logn})$ | logn | $\log _{2} \mathrm{n}$ | n | nlogn | $\mathrm{n}^{2}$ | $\mathrm{n}^{3}$ | $2^{\text {n }}$ | n ! |
| :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: |
| 10 | 2 | 3 | 11 | 10 | 33 | $10^{3}$ | $10^{2}$ | 1024 | 3528800 |
| $10^{2}$ | 3 | 7 | 44 | 100 | 664 | $10^{6}$ | $10^{4}$ | $\begin{gathered} 1.2677 * 10_{3} \\ 0 \end{gathered}$ | $9.33 * 10^{157}$ |
| $10^{3}$ | 3 | 10 | 99 | 1000 | 9966 | $10^{9}$ | $10^{6}$ | $10.71 * 10^{300}$ | * |
| $10^{4}$ | 4 | 13 | 177 | 10000 | 132877 | $10^{12}$ | $10^{8}$ | * | * |
| $10^{5}$ | 4 | 17 | 276 | 1000000 | 1600964 | $10^{16}$ | $10^{10}$ | * | * |
| $10^{6}$ | 4 | 20 | 397 | 1000000 | 19931569 | $10^{18}$ | $10^{12}$ | * | * |

## Growth-Rate Functions

- Number of operations required as a function of $n$

## Growth-Rate Functions

- Representing an Algorithm's complexity
- Big O notation
- Order of at most $n$
- Order of at most $n^{2}$
- Order of at most 1

| Algorithm A | Algorithm B | Algorithm C |
| :---: | :---: | :---: |
| ```sum = 0 for i = 1 to n sum = sum + I``` | ```sum = 0 for i = 1 to n for j = 1 to i sum = sum + 1``` | sum $=\mathrm{n}^{*}(\mathrm{n}+1) / 2$ |
| n | $\left(\mathrm{n}^{2}+\mathrm{n}\right) / 2$ | 3 |
| $\mathrm{O}(\mathrm{n})$ | $O\left(n^{2}\right)$ | O(1) |

## Growth-Rate Functions

- Effect of doubling the problem size on an algorithm's time requirement

| Growth-Rate Function for Size $\mathbf{n}$ <br> Problems | Growth-Rate Function for Size <br> 2n Problems | Effect on Time Requirement |
| :--- | :--- | :--- |
| 1 | 1 | None |
| $\operatorname{logn}$ | $1+\operatorname{logn}$ | Negligible |
| $n$ | $2 n$ | Doubles |
| nlong | $2 n \operatorname{logn}+2 n$ | Doubles then add $2 n$ |
| $n^{2}$ | $(2 n)^{2}$ | Quadruples |
| $n^{3}$ | $(2 n)^{3}$ | Multiplies by 8 |
| $2 n$ | $2^{2 n}$ | Squares |

## Analysis and Big O Notation

- Algorithm $A$ is said to be order $f(n)$
- Denoted as O(f(n))
- Function $f(n)$, called algorithm's growth rate function
- Notation with capital O denotes order
- Algorithm A of order denoted $O(f(n))$
- Constants $k$ and $n_{0}$ exist such that
- A requires no more than $k f(n)$ time units
- For problem of size $n \geq n_{0}$

## Analysis and Big O Notation

- Order of growth of some common functions

$$
\left.O(1)<O\left(\log _{2} n\right)<O(n)<O n \log _{2} n\right)<O\left(n^{2}\right)<O\left(n^{3}\right)<O\left(2^{n}\right)
$$

## Analysis and Big O Notation

- Worst-case analysis
- Worst case analysis usually considered
- Easier to calculate, thus more common
- Average-case analysis
- More difficult to perform
- Must determine relative probabilities of encountering problems of a given size

## Keeping your Perspective

- ADT used makes a difference
- Array-based getentry is O(1)
- Link-based getEntry is O(n)
- Choosing implementation of ADT
- Consider how frequently certain operations will occur
- Seldom used but critical operations must also be efficient

## Analysis and Big O Notation

- If problem size is always small
- Possible to ignore algorithm's efficiency
- Weight trade-offs between
- Algorithm's time and memory requirements
- Compare algorithms for style and efficiency

## Note: Efficiency of Searching Algorithms

- Sequential search
- Worst case: O(n)
- Average case: O(n)
- Best case: O(1)
- Binary search
- Worst case: O(log $\left.{ }_{2} n\right)$
- At the same time, maintaining array in sorted order requires overhead cost which can be substantial

Thank you

[^0]:    $1+2+3+\ldots+n-1+n$ for an integer $n>0$
